

Knowledge your horse expects you to have.

The clinic starts Saturday morning at 9am but we will not collect the fee until the first break at about 10.30am. This gives you the chance to come and check us out without having to pay. If we manage to make you interested you pay the \$100 and stay until 6pm (otherwise you just leave during the break). Sunday also starts at 9am (but this time we will collect the \$100 fee at the door). Don't be fooled by the low price thou. This clinic is extremely informative and might very well change your life.

We will explain how to make horse keeping easier and your horse healthier at the same time. We will discuss most of the common hoof issues and show you how easy they are to cure and explain where the misunderstandings are that has given them such a bad reputation. We will merge the separate parts of environment, feeding, digestion, brittle bone disease, hoof shape, common sense and simple physics to one complete picture of a healthy horse. While doing this we will also remove lots of unnecessary pain caused by human misunderstandings from this picture.

You will see that most of the feared hoof conditions are easy to rehabilitate when you understand what really has caused the problem. We will show you video sequences, of both the inside and the outside of hooves, which will astonish you. We will show you real hooves that will show you what really happens inside when you do changes to the outside. We would like veterinarians, farriers, barefoot specialists and of course lots of horse owners come because we believe everybody has the same right to knowledge.

We don't do bickering, we don't do politics and we don't sell any products.

We will not only explain why it is completely unthinkable to feed your horse three servings per day. We will also explain what happens to the digestive system when you feed your horse portions or just allow your horse to fill its mouth with food and what to do instead. You will probably be surprised when you see that the only solution acceptable to the horse's digestive system also is the most hygienic, cheapest and most comfortable for you at the same time as it solves a bundle of other issues. Don't worry; we will show you solutions for all kinds of horse keeping.

Only a masochist would do it any other way.

We will discuss lots of different topics related to hooves and feeding and always analyze what the real issue is, what has caused it, why it happened, how it affects the horse and what you can do about it.

Our recommendation is that you bring your veterinarian, your hoof care provider, all your friends, your neighbors and your enemies because it will be much easier for you if they know what you are talking about. By the way tell your favorite horse magazine to come too.

We will try to answer all your hoof related questions (except why all this isn't common knowledge even thou it is so simple, logical and well proven).

Check www.SwedishHoofSchool.com for clinic details.

A sound horse doesn't shift it's weight between it's front legs.
This one does and it is easy to see why.
